

Experiment 1

Flight Reservation

AIM:

To design and build a SaaS-based Flight Reservation System on Zoho Creator that allows users to book domestic or international flights with dynamic form validation and automated email confirmation.

PROCEDURE:

1. Create a new form named Flight Booking in your Zoho Creator account.
2. Add necessary fields like Trip Type, Category, From, To, and Dates.
3. Include passenger details, email, phone number, cabin class, and fare type.
4. Set a rule to hide Return Date when One Way is selected.
5. Configure validation to restrict past dates and invalid return date selections.
6. Setup an On Success workflow to automatically send e-ticket booking emails.
7. Test the full application to confirm field rules and email notifications.

IMPLEMENTATION:

The screenshot displays the 'Flight Reservation' application interface. On the left is a dark sidebar with a menu containing 'Pick Your Seat' (selected), 'Booked Seats', and a user profile at the bottom labeled 'PUVIYA OSW...'. The main content area is titled 'Pick Your Seat' and contains a form with the following fields: 'Passenger Name' (split into 'First Name' and 'Last Name'), 'Mobile Number' (with a dropdown for country code '+91' and the number '81234 56789'), 'Email', and 'Date' (set to '02-Oct-2026'). Below these fields is a seat selection grid showing a 3x4 layout of seats, with the middle seat in the second row highlighted in blue. At the bottom of the form are 'Time' (format HH:mm:ss) and 'Departure' fields. Two buttons, 'Book Now' and 'Reset', are located at the bottom right of the form.

RESULT:

A cloud-based Flight Reservation System was successfully built and tested on Zoho Creator. It dynamically handles one-way and round-trip bookings, validates user inputs, and sends instant automated confirmation emails to travelers.
