EXPERIMENT 11

ONLINE SUPERMARKET

Create a simple cloud software application for online super market using any Cloud Service Provider to demonstrate SaaS with the template of customer name, address, phone, email, items, quantity etc. with the item classification form.

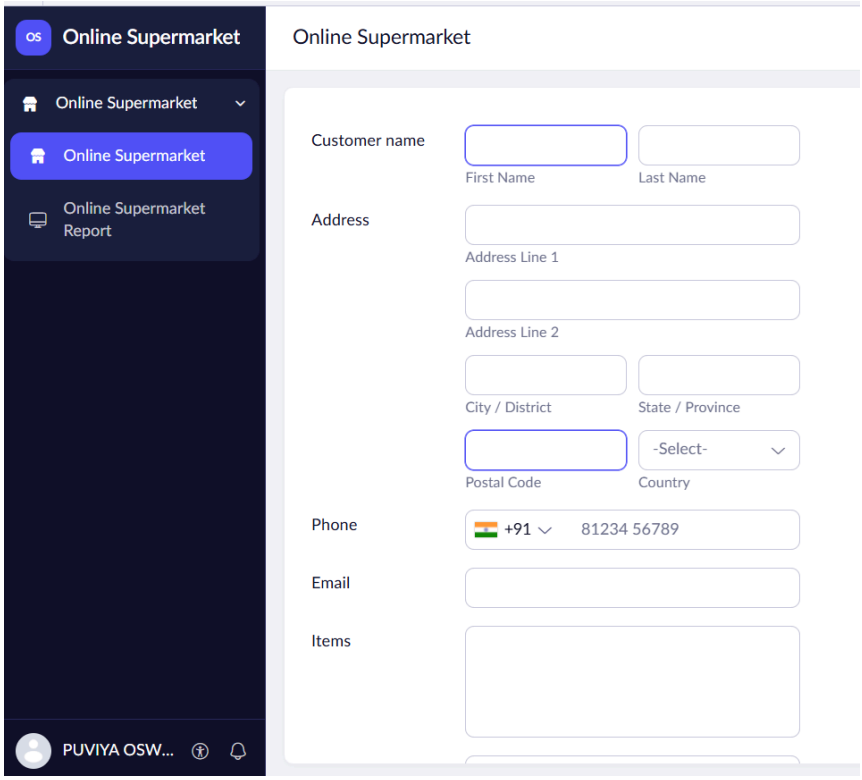

AIM:

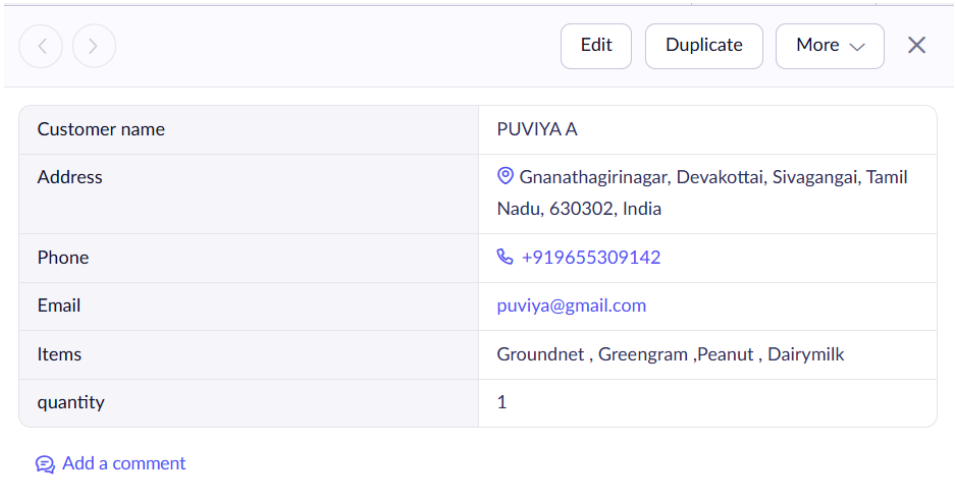

To design and create a simple cloud-based software application for an online supermarket using Google Workspace / Google Cloud tools (demonstrating Software as a Service - SaaS) that incorporates customer details (Name, Address, Phone, Email) and order details (Items, Quantity) along with an item classification system.

PROCEDURE:

1. **Create Database:** Set up a Google Sheet with headers for *Customer Details*, *Category*, and *Items*.
2. **Build Form:** Create a Google Form with fields for customer info and supermarket item choices.
3. **Link Data:** Connect the Google Form to save submissions directly into the Google Sheet.
4. **Automate:** Use Google Apps Script (`MailApp`) to auto-email an order confirmation receipt.
5. **Test:** Submit a form entry to verify data saving and receipt delivery.

IMPLEMENTATION:

RESULT:

The SaaS-based online supermarket application was successfully created and deployed using Google Cloud/Workspace services. The software collects customer details, processes categorized item selections through an interactive web form, automatically stores data in a cloud database, and triggers real-time digital receipts.
