EXPERIMENT 10

STUDENT INFORMATION

Create a simple cloud software application to run a c program to display the student

information using any Cloud Service Provider to demonstrate SaaS with the template

of student name, reg no, address, phone, age, courses, grades and attendance report,

progress report, Semester mark sheet forms

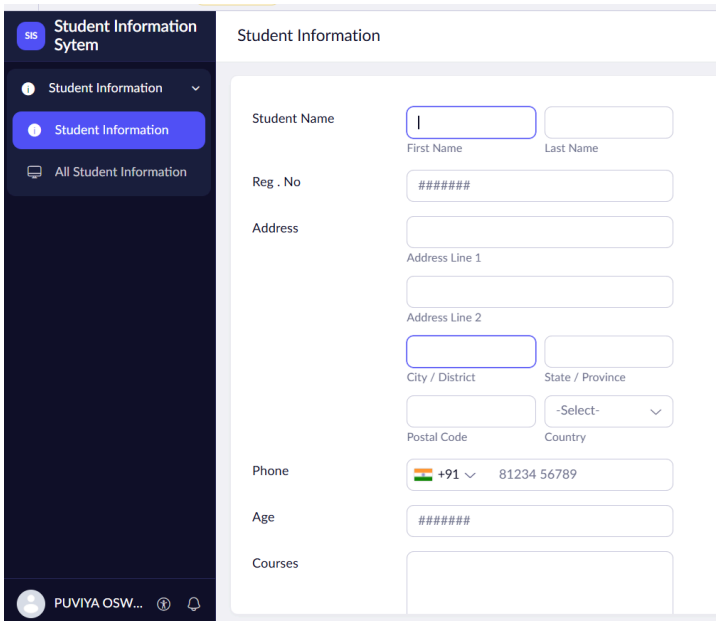

AIM:

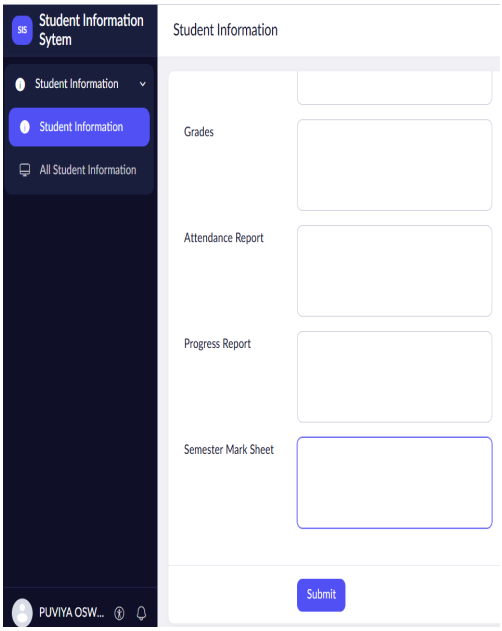

To demonstrate Software as a Service (SaaS) in a cloud computing environment by creating, hosting, and executing a C program that displays comprehensive student information, including student profile details, course grades, attendance, progress report, and a semester mark sheet.

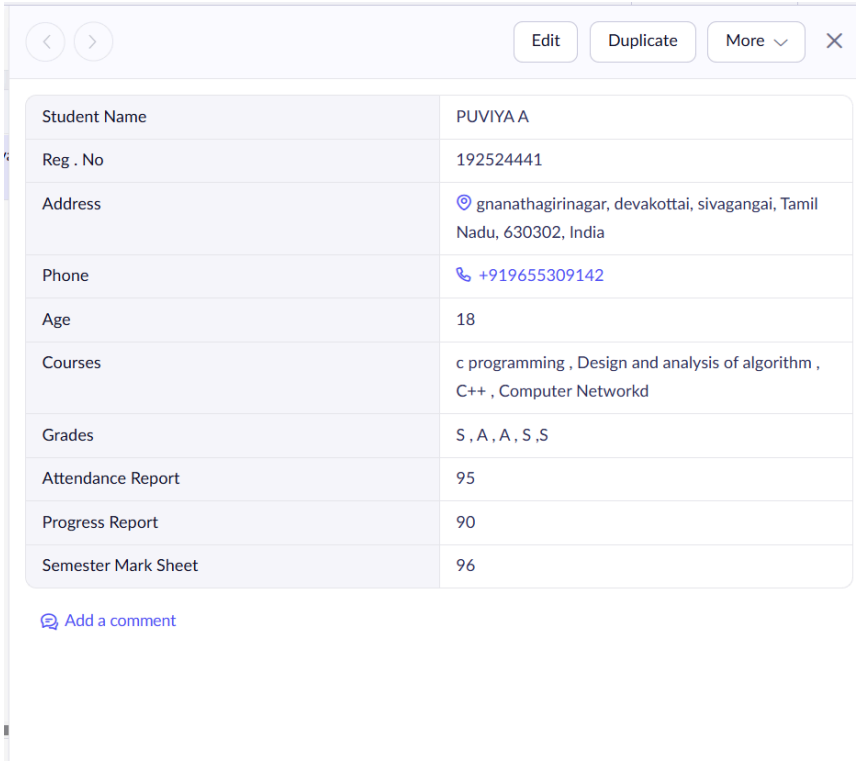

PROCEDURE:

1. Open Cloud IDE: Launch a cloud platform in a browser.
2. Create File: Create `student_info.c`.
3. Write Code: Enter the C program for student details.
4. Compile Code: Compile using the cloud compiler.
5. Execute Program: Run the file to show the report.
6. Verify Output: Check details, grades, and attendance.
7. Demonstrate SaaS: Run entirely online without software installation.

IMPLEMENTATION:

RESULT:

The C application displaying student details, semester mark sheet, attendance, and progress report was successfully written, compiled, and executed using a cloud-based SaaS platform without local software installation.
