EXPERIMENT 9
HOSPITAL INFORMATION

Create a simple cloud software application for Hospital information system for SIMATS Hospital using any Cloud Service Provider to demonstrate SaaS with fields of

patient name, age, address, phone, email, Attender name, attender phone, doctor name,

diseases, etc**.**

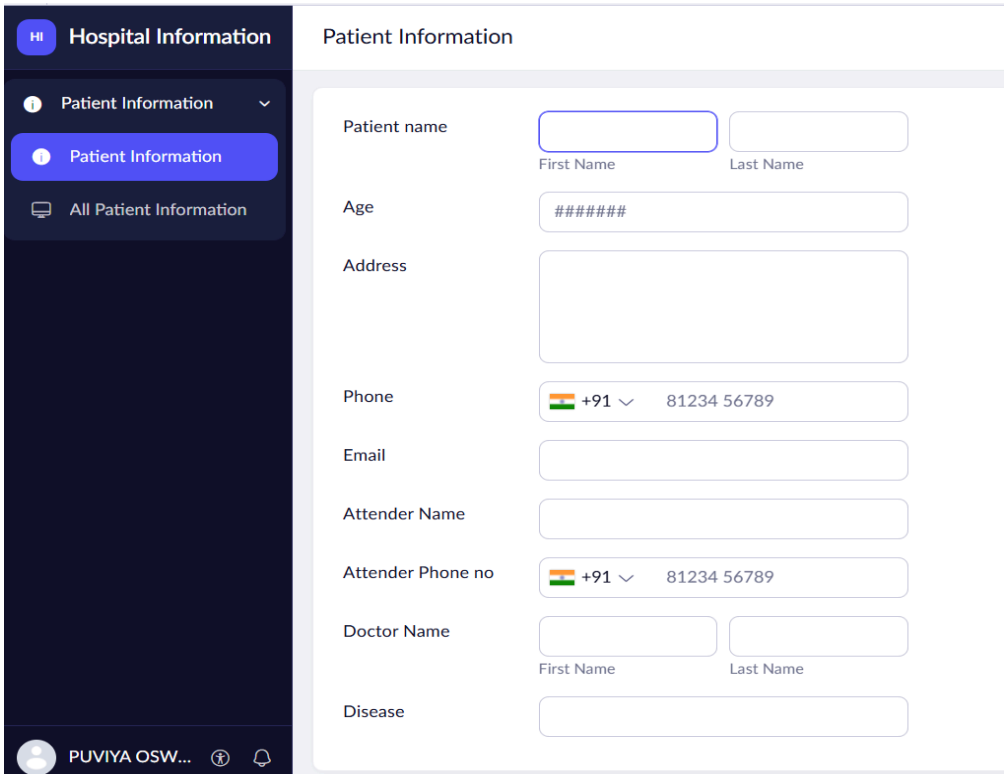

AIM:

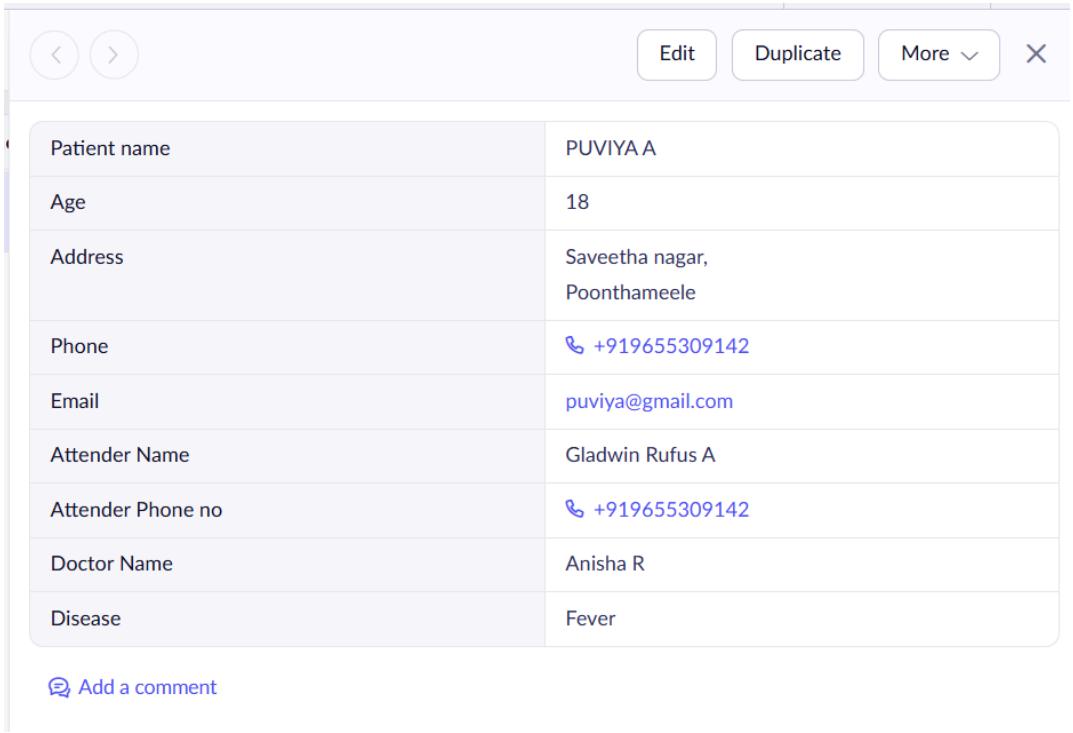

To design, build, and deploy a cloud-based **Hospital Information System for SIMATS Hospital** using Zoho Creator (SaaS model) to manage patient registration, record attending doctor details, and maintain emergency contact and diagnostic information online.

PROCEDURE:

1. Create App: Click Create Application > From Scratch in Zoho Creator (Name: *SIMATS Hospital Information System*).
2. Add Form: Drag and drop a Form component onto the builder canvas.
3. Add Inputs: Create fields for Patient Name, Age, Address, Phone, Email, Attender Name, Attender Phone, Doctor Name, and Diseases/Diagnosis.
4. Configure Report: Set up an automated Patient Record List to allow authorized hospital staff to search, view, and filter patient profiles.
5. Publish & Run: Click Publish and open the public URL to register patients and access records online.

IMPLEMENTATION:

RESULT:

The cloud-based SaaS **SIMATS Hospital Information System** application was successfully created and deployed. Healthcare staff can access the portal via a web browser using the public URL to securely enter patient profile details, attender contact numbers, assigned doctors, and diagnosis details without local software installation.
